EIGHTH ANNUAL REPORT

OF THE

WATER COMMISSIONER

FOR THE YEAR 1902-1903.

OFFICE OF THE WATER COMMISSIONER,

CITY HALL, BOSTON, February 1, 1903.

HON. PATRICK A. COLLINS,

Mayor of the City of Boston :

SIR, — I submit herewith the eighth annual report of the Water Commissioner for the year ending January 31, 1903.

The total receipts of the department for the year (including \$200,000 credited from taxes) were \$2,608,378.02, and the total expenditures were \$2,546,608.90, the balance of \$61,769.12 being carried over to the next year.

The increase from sales of water over the previous year was \$92,307.67.

The amount expended for current expenses and extensions for the year was \$742,973.08, being a decrease of \$127,021.16 from the previous year.

The Metropolitan Water Assessment was \$1,274,105.31, an increase of \$104,999.69 over that for last year.

The net water debt on this date is \$607,384.06, it having been decreased by the sum of \$322,083.45 during the year, and there are now outstanding water loans to the amount of \$9,501,000.

The Water Sinking Fund being ample to take care of the present water debt, there was no sinking fund requirement for the year.

Owing to the many changes in and additions to various underground systems which are continually being made, the question of the safe maintenance of the water mains has become a serious problem, and the work of the department has thereby grown more difficult and expensive. Quite a number of changes in water mains of considerable extent were made necessary on account of subway construction in State street, and by the abolishment of grade crossings at Blue Hill avenue and Oakland street. The various kinds of pavement now generally in use, such as asphalt, pitch and pebble, and cement with concrete base, also tend largely to increase the expense of carrying on the department.

The work of relaying mains too small for present demands made upon them for fire protection, and of replacing mains weakened by action of the soil in which they were laid, has received special attention, resulting in a very great improvement in the fire service of the city. Some of the notably weak places in the pipe system have already been strengthened, but much work of this kind still remains to be done to adequately meet the demands of the future.

The demand for the high service is constantly increasing, and a number of extensions of high-service mains have been made in various parts of the city proper, necessitated by the installation of fire pipe systems in high buildings.

A close inspection has been maintained in all cases where pipes have been exposed by the operations of corporations, contractors, etc., and constant care has been exercised to prevent the conduits and other underground fixtures of said corporations, etc., from being constructed in such a manner as to render the water pipes inaccessible or liable to damage from contact. The construction of the new high-level surface drains in certain sections of the city has necessitated a great many changes in water pipes at considerable expense to allow of the uninterrupted passage of said drains.

Many of the old-style Boston hydrants, obsolete in type and of insufficient capacity, have been abandoned and replaced by the more modern post hydrants, of which 388 have been established during the year. In the past the department has experienced much trouble from the indiscriminate use of hydrants by careless or mechanically ignorant persons outside of the Water or Fire Departments, such use almost invariably resulting in injury to the hydrants, thus impairing their use and causing delay in case of fire. This trouble has been remedied to a great extent by restricting the use of hydrants, outside of the Fire Department, to only those who could show a badge of authority from the Water

Commissioner. The aid of the Police Department has been requested in the enforcement of this restriction. A force of men were kept at work during the cold weather inspecting the hydrants daily for the purpose of keeping them in constant readiness for use in fire extinguishment.

A special force has been kept at work much of the time during the past year in blowing off the stagnant water from the various dead-ends throughout the city, this work being carried on mostly at night in order to avoid inconvenience to water-takers. These dead-ends were "blown off" 1,132 times, or double the number of times for the year previous. The ends are being abolished as fast as practicable by connecting them so as to make a circulation of water.

In the relaying of mains, large quantities of old pipes accumulate, which, in most cases being of no further use, are carted to the yard, broken up and sold for old junk. The equitable and very satisfactory method of selling this junk at auction has been continued, and a further improvement made by the insertion of a clause in the terms of sale specifying that no allowance will be made for dirt, and that the junk must be bought and paid for just as it is at the time of sale. This method has proved very successful, inasmuch as it eliminates a much-vexed question which was always a source of trouble.

In cases where it becomes necessary to shut off water while making connections of mains, etc., in the business sections of the city, the work is, as far as practicable, done after working hours, so as to avoid as far as possible the interruption of business.

To avoid the spread of disease among horses the watering troughs throughout the city have been regularly emptied, and their interiors burned with a torch, thus destroying any germs that may have been deposited or developed therein.

The shops at the Albany-street yard have been kept running throughout the year in the manufacture of gates, hydrants, cocks and other fittings necessary to the maintenance of the works.

Reports of the Superintendents of the Income and Distribution Divisions showing details of work performed, also report of the Engineer, will be found herewith annexed.

Respectfully,

EUGENE S. SULLIVAN,

Water Commissioner.

Total receipts from all sources	\$2,608,378 02
Total expenditures for all purposes	2,546,608 90
Balance at end of year	<u>\$61,769 12</u>

TOTAL RECEIPTS OF THE YEAR BY SOURCES.

Sales of water	\$2,280,358 09
Interest on Water Works fund	65,634 62
Service, elevator, fire, motor and stand-pipes, and repairs, labor, materials, etc., for miscellaneous work	44,934 86
Sales of old materials, etc.	7,480 45
Difference on cost of laying main pipes	3,182 97
Fees for summonses	2,089 00
Shutting off and letting on water, account of repairs	1,733, 50
Shutting off and letting on water, account of non-payment of bills	1,612 00
Use of West Roxbury pumping plant	820 00

REPORT OF INCOME DIVISION.

CITY HALL, BOSTON, February 1, 1903.

MR. EUGENE S. SULLIVAN,

Water Commissioner:

SIR:—Herewith follows the annual report of the Income Division, Water Department. The report of the Meter Service Division covers the financial year ending January 31, 1903; the remainder of the report is rendered for the calendar year ending December 31, 1902—it being impracticable, owing to the nature of our accounts, to render it for the financial year.

Respectfully submitted,

J. H. CALDWELL,

*General Superintendent Income Division.***Table I.***Statement of Water Rates—January 1, 1903.*

Account of Year.	Amount Assessed.	Amount Abated.	Amount Collected.	Balance Outstanding.
1894.....	\$2,163,625 70	\$51,615 19	\$2,112,006 01	\$4 50
1895.....	2,266,519 08	55,409 79	2,211,008 55	100 75
1896.....	2,568,246 04	*95,157 39	2,473,083 65	5 00
1897.....	2,630,413 37	53,864 09	2,576,549 28
1898.....	2,342,793 38	† 235,414 43	2,107,378 95
1899.....	2,414,731 72	† 257,930 16	2,156,246 26	555 30
1900.....	2,197,016 84	56,457 05	2,150,077 39	482 40
1901.....	‡ 2,264,719 20	45,264 09	2,217,654 13	1,800 98
1902.....	‡ 2,325,453 31	20,764 62	2,011,338 69	293,350 00

Above amounts for years 1894, 1895, 1896, and 1897 include both Cochituate and Mystic supply accounts. The contracts to supply Chelsea, Somerville, and Everett with Mystic water were abrogated by the Metropolitan Water Act on January 1, 1898.

*This amount includes certain City Department accounts, abated by order of the Mayor.

†These amounts include abatements of City Department accounts, under order of the City Council, approved by the Mayor on March 5, 1900.

‡No City Department accounts in these amounts, such charges having been abolished by an order of the City Council, approved by the Mayor on March 5, 1900.

Table VI.*Number and Amounts of Abatements Allowed during the Year 1902.*

ON ACCOUNT OF ASSESSMENTS FOR YEAR.	Number.	Amount.
1900	43	\$551 81
1901	2,136	22,150 36
1902	3,102	20,764 62
Total	5,281	\$43,466 79

The abatements allowed on account of 1902 assessments, amounting to \$20,764.62, were due to changes in occupancy of premises, changes in ownership, vacancies, errors in valuations and assessments, inaccuracy of meters as proved by tests, underground leaks for which the owner could not be held entirely responsible, and for other reasons, which, in the judgment of the General Superintendent, entitled the water-taker to consideration.

The abatements on account of 1900 and 1901, were due to bills uncollectible, changes of ownership, failures, shut-off for non-payment, cleaning up old accounts.

Sidewalk uprights above and below grade	7,268
Sidewalk uprights in way of edgestones	45
Sidewalk uprights required renewal	68
Stopped by dirt	67
Stopped by fish	53
Stopped by gasket	21
Stopped by rust	323
Struck by pick	124
Service pipes (portions of) changed from $\frac{1}{2}$ inch to $\frac{3}{8}$ inch	3
Service pipes changed from tin-lined to all lead	3
Service pipes extended on account of street widening	3
Service pipes lowered as protection from frost	7
Service pipes moved from way of various corporations,	44
Service pipes shut off and let on to permit owners to make repairs	391
Sidewalk cocks and uprights given to individuals to apply on private pipes	41
Water post repairs of various kinds	345
Water posts numbered	415

In addition to the foregoing :

Main pipes, in danger of collapse through the operations of various contractors and corporations, were watched night and day. This refers especially to along the line of the Metropolitan sewer in West Roxbury, where blasting was done to a consider-

able extent, and in State street, city, where the East Boston tunnel is in course of construction. This latter work necessitated extensive changes in the arrangement of our pipes, all of which were carried out without accident or hitch, although under the most unfavorable conditions.

The pipes in the harbor were watched and, when necessary, protected from the incursions of tide water.

Test holes were dug along the line of the 30-inch low-service main in Tremont street, between Dover and Ruggles streets, to enable the Engineering Department to determine the condition of the pipe.

The syphon pipes at the different bridges were emptied during the cold weather and refilled as soon as weather conditions would permit.

Inspectors were constantly employed looking after the interests of the Water Department where corporations and contractors were at work. Conduits and other underground fixtures are being laid in the already overcrowded streets of the city, and it is always a great temptation to those in charge of this work to either lay their conduit over our main or else so near to it as to make it impossible to reach it to make repairs. This is a serious matter, and nothing short of eternal vigilance on our part serves to protect us.

In addition to the above mentioned work, the Machine, Carpenter, Paint, Plumbing, and Blacksmith shops performed much work of a miscellaneous nature in the maintenance and improvement of the property of the Water Department. Some of the important items are as follows :

Painted building in East Boston yard.

Razed ice-house and removed material of the same at East Boston.

Painted and whitewashed the different shops and buildings in the Albany-street yard.

Made large oak cabinet to hold plans.

Painted gate-house, fence, and telephone poles at Parker Hill reservoir.

Whitewashed tool-house at Charlestown yard.

Laid new floors in wash and carriage rooms at Charlestown yard.

Made and lettered 600 "paint" signs, to be attached to newly painted hydrants.

Scraped and painted second-hand pipes and specials reclaimed from the ground.

Painted 1,113 miscellaneous hydrant castings.

Made 12,392 repairs on tools, mostly picks, bars, and chisels. Aggregate cost of same, \$1,690.88.

Performed 941 odd jobs of varying extent about the Albany-street yard, maintaining and improving the property of the department. Aggregate cost of same, \$907.74.

Performed 87 odd jobs of varying extent in and about the various reservoirs and district yards of the department. Aggregate cost of same, \$711.68.

Made 270 tools for various purposes. Aggregate cost, \$600.66.

Made patterns for hydrants, gates, caps, etc. Aggregate cost, \$564.16.

Made 47 test-bars of composition for expert tests of tensile strength.

Performed work of miscellaneous character for the Income Division and Engineering Department amounting to a total cost of \$55.05.

REPORT OF THE ENGINEER.

ENGINEERING DEPARTMENT,
50 CITY HALL, February 2, 1903.

MR. EUGENE S. SULLIVAN,
Water Commissioner :

SIR, — I herewith submit the following report for the past year of the work done and records kept:

Some of the most important work done is as follows :

The 40-inch low service main in Brookline avenue was originally laid in 1859, and for about 1,800 feet where imbedded in soft marsh mud, it had become corroded so as to be dangerously weak. For a distance of 1,370 feet southerly from Butler street it has been relaid; the new location is in clean earth, entirely above the mud. It is intended to finish the work during the coming year.

The 30-inch high service main in Washington street, Dorchester, was extended from Talbot avenue to Burt street, a distance of 1,515 feet, connection being made with the local distribution system at Rockwell street. About 1,000 feet of 30-inch low service main was laid in Southampton street where the grade of the street was raised over the tracks of the N.Y., N.H. & H. R.R., and a short length of 30-inch low service main was laid in Southampton street across the second waterway west of the N.Y., N.H. & H. R.R., replacing a 24-inch spiral steel pipe which had failed.

A 16-inch low service main was laid in Bedford street from Summer to Washington street.

A 16-inch low service main was laid in Harrison avenue from Northampton to Dudley street, replacing a 6-inch main.

A 16-inch low service main was laid in Dorchester avenue from Second to A street, replacing a 6-inch main.

A 16-inch low service main was laid in Columbia road from Douglass to Vale street, completing the 16-inch line on the southerly side of South Boston.

Changes in and additions to various underground systems are continually being made, and the question of the safe maintenance of our water mains under difficulties is ever

Test of 12" Gate

present; much time has been spent during the year on account of work of this kind. Some of the larger changes in water mains were made necessary in the case of subway construction on State street and the grade crossings at Blue Hill avenue and Oakland street.

Since 1896 a consistent policy has been followed of relaying mains too small for present demands made upon them for fire protection, and mains whose strength have been impaired by the soil in which they were laid; the result has been that a very great improvement in the fire service of the city has been made. The notably weak places in the system have already been strengthened, but much work of this kind still remains to be done to adequately meet the demands of the immediate future.

The following statement shows the relaying which has been done since 1896 in the City Proper and South End, exclusive of a large amount of work in other portions of the city:

28,000	feet	16	inch,	replacing	6	inch,	8	inch	and	12	inch.
60,500	"	12	"	"	4	inch,	6	inch,	8	inch	and 12 inch.
16,100	"	10	"	"	4	inch	and	6	inch.		
23,400	"	8	"	"	4	inch	and	6	inch.		
20,288	"	6	"	"	4	inch	and	6	inch.		

148,288 feet, or 28.1 miles.

The accompanying map, at end of report, shows the work done in this line, and also the general distribution system of this portion of the city.

A break occurred in the 30-inch main on Tremont street at West Newton, under conditions shown in cut opposite. The following are the results of tests made to determine the holding power of caps on ends of pipe; the caps and spigot ends used were of standard B.W.W. design, except in the cases mentioned where pipes were used without beads: the lead joints were 2 inches by $\frac{1}{2}$ inch (unless otherwise stated), and were made to correspond as closely as possible to the actual practice of the Water Department. Pressure was supplied by a small hand force-pump.

Results of Tests.

Size of cap.	Number of test.	Leaking began, pounds per sq. in.	Movement of cap. ins.	Total pressure, pounds per sq. in.	Total movement of cap. ins.	REMARKS.

16 "	1	150	None	160	$\frac{1}{2}$	Lead joint 4 in. x $\frac{1}{2}$ in.
16 "	2	160	"	500	Lead joint 4 in. x $\frac{1}{2}$ in.; became tight at 400 pounds. At 500 pounds cap nearly off end of pipe, lead having moved only $\frac{1}{4}$ in.

A test was made to determine the strength of the new style of 12-inch gate which was designed in this office, and is manufactured in the machine shop of the Water Department. The composition plug (made of 40 parts copper, $3\frac{1}{2}$ parts tin, $1\frac{1}{2}$ parts zinc, $\frac{1}{4}$ part lead) was first tested by bolting a "test ing" head or cap to one bell of the gate, seating the plug and applying pressure to the space between cap and plug; the elastic limit of the composition was reached at a pressure between 525 and 550 pounds per square inch; at 725 pounds per square inch a leak developed in the body of the gate and the test was discontinued. The deflection at centre of plug was measured for each 25 pounds increase of pressure. The high pressure noticeably dished or curved the centre web of plug but no crack developed.

The cast-iron shell was tested with the plug open and with testing heads on each bell securely tied together by steel rods; the deflection of the shell for each 25 pounds increase of pressure was measured on each side separately at the centre of the flanges between body and bonnet of gate. At a pressure of 775 pounds per square inch a crack developed in the flange of the body, but did not extend into the body proper; at 850 pounds per square inch three cracks developed in the flanges and two in the body of gate, at the same time one entire side of the bonnet was blown out, flying across the room with considerable force, the water falling to the floor quietly. The deflections of the iron shell were uniform until fracture occurred. Previous to applying the high pressure water was allowed to run freely through the stuffing-box in order to expel the air, and once during the test it was necessary to tighten up the stuffing-box in order to prevent leakage.

There are decided indications of danger from electrolytic action in the vicinity of the new power house of the Boston Elevated Railway Company on Commercial street and, also, in the vicinity of their other power stations. However, during the past year, the only damage by electrolysis which has been discovered has been to a few service pipes. The electrical surveys that have been made have not shown the conditions to be more alarming than for the past few years. A large number of observations and tests of the condition of old mains have failed to discover any evidence of serious damage. In view of the fact that serious damage has been done during the past year on the Metropolitan System and to pipes in surrounding towns, it is surprising that more evidence of damage from electrolysis has not been found.

Respectfully submitted,

WILLIAM JACKSON.
